

## **Chadormalu Mining & Industrial Co.**

### **Chadormalu's Mine**

Chadormalu is located at center of Persia (Iran) Desert, where no human life effects can be seen except chadormalu members.

Because of desert, at summer chadormalu is hot and at winter it is cold. Temperature changes at winter nights up to summer none are between - 16C to 45C and regional winds velocity is about 90 km per hour, and the maximum amount of raining is about 11 Centimeter.

To create green places depend on many factors such as environmental condition, soil type, water resources and other factors.

This desert has many natural shortages such as hot temperature, hard soil, water lack ... and also, there is limitation for chosen at the plants, which can grow in these conditions, with high effectiveness, so, can create fresh air, cool shadow and are as air conditions.

Creation green place at chadormalu is as follows:

Implant of each tree needs a hole then suitable soil has been provided from 75 KM place far from chadormalu and crockery jug should be implant with the tree for wet supplying.

It is worthy to mention, for durational irrigation, water is supply from 35 KM array. It is obvious for environment experts and lovers considering to above problems, one tree planting or 1 m<sup>2</sup> green place creation costs about 20 times of ordinary conditions.

So, these const and strove results end to sharp and cool view sight at center of desert which everybody encourages it. Green place protection by its people and environmental knowledge increases has been as motivation in order to everybody uses environmental management system at his daily program.
